

LONDON FIRE BRIGADE

Decision title

LFB in a Digital World – Annual Update Report

Recommendation by
Chief Information Officer

Decision Number
LFC-0315-D

Protective marking: **OFFICIAL**

Publication status: Published with redactions

Summary

Report LFC-0315 provides update on the Brigade's current three-year information and technology strategy – LFB in a digital world, 2019 – 2021, which was approved by the Commissioner in December 2018 (LFC-0094-D). As part of the commitment to ensure that the strategy remains current and focused, the intention is to provide periodic updates to the Brigade's corporate boards in respect of progress in delivering the strategy, and the refresh the strategy on an annual basis. The review of the strategy is an action in the agreed Delivery Plan.

This report highlights any changes to elements of the strategy and also reports on progress against the deliverables set out in the three-year work plan.

Decision

That the London Fire Commissioner approves the updated information and technology strategy – LFB in a digital world, 2020 – 2023.

Andy Roe
London Fire Commissioner

LONDON FIRE BRIGADE

LFB in a digital world – Annual Update Report

Meeting

Corporate Services Directorate Board
Commissioner's Board

Date

21 January 2020
26 February 2020

Report by

Chief Information Officer

Document Number

LFC-0315

Protective marking: **OFFICIAL**

Publication status: Published with redactions

Summary

The Brigade's current three-year information and technology strategy – *LFB in a digital world, 2019 – 2021*, was approved by the Commissioner in December 2018 (LFC0094-D). As part of our commitment to ensure that the strategy remains current and focused, the intention was to provide periodic updates to the Brigade's corporate boards in respect of progress in delivering the strategy, and the refresh the strategy on an annual basis. The review of the strategy is an action in the agreed Delivery Plan.

This report highlights any changes to elements of the strategy and also reports on progress against the deliverables set out in the three-year work plan.

Recommendations

That the London Fire Commissioner approves the updated information and technology strategy – *LFB in a digital world, 2020 – 2023*.

Background

1. The Commissioner approved a high-level digital strategy – *LFB in a Digital World, 2019-2021* – in December 2018 (LFC0094-D). This paper provides an update to the strategy and a narrative on progress against key deliverables. In addition, this report includes a copy of the three-year work plan detailing change initiatives and showing projects/activities completed since the strategy was agreed, and new initiatives added. The review of the strategy is an action in the agreed Delivery Plan under the strategic pillar "Delivering excellence" and within the theme "Constantly improving effectiveness of our service". .

The strategy – a recap

2. The strategy presents a high-level view of the strategic information technology and information management priorities for the Brigade. There are three distinct threads running through this strategy:
 - A focus on Cloud technology,
 - Emphasis on a resilient and secure infrastructure,
 - A belief that data is intrinsic to our digital transformation.
3. The strategy looks at:
 - Where we are now,
 - The power of data and information,
 - Tipping point... between being office based and supporting mobile working,
 - New ways of working, collaborative working and working with our partners,
 - Investing in our staff,
 - Taking advantage of Cloud based services,
 - Financial challenges,
 - Digital for our service users.

Use of the strategy as a communication tool

4. It is important that all staff understand the direction of the strategy and what it means for them. To assist with this objective, the strategy makes extensive use of 'personas' for a variety of different roles across the organisation, to describe the Brigade's information and technology plans over the life of the strategy. The feedback we received regarding the use of personas has been very encouraging. It was felt that this was a very effective way of bringing technology to life, in a real work situation.
5. It was particularly pleasing to receive such positive feedback from the Mayor's chief digital officer (Theo Blackwell), via the Deputy Mayor for Fire and Resilience. In addition, the CIO presented the strategy at two conferences during 2019, "Mission Critical Technologies" and the "Emergency Services Show", where again we received good feedback in relation to the strategy and use of personas in particular.
6. A vision of the way ahead for the use of digital technologies is illustrated in appendix A of the strategy by looking at how technology might change the way people work through different personas. This is intended to bring the strategy to life for different staff groups.
7. The strategy is accompanied by an updated detailed three-year work plan (which is reviewed monthly), which will include our key priorities for the next year, as well as other projects and work

streams/actions. The current top priorities – to be delivered during the life of the strategy and after – are summarised in appendix B of the strategy.

Significant updates since the strategy was agreed

Relocation of secondary data centre

8. The most significant change that has occurred since the strategy was approved, relates to the use of the TfL shared data centre at Woking and our plans to utilise cloud-based *disaster recovery as a service* (DRaaS). ICT have been using the TfL facility for several years and were in the process of planning to vacate from Woking within two years, as TfL's own use of the building was diminishing and they would eventually vacate as well.
9. As the site was primarily used for service continuity, in times when the LOC Data Centre (at Merton) may not be available, ICT had planned to migrate to a DRaaS cloud offering from Microsoft Azure, whereby the need for a physical data centre for service continuity was removed. Instead the Microsoft (Azure) cloud would be used instead.
10. However, whilst evaluating our options for a lease extension, it became apparent that the Brigade could use the Brigade mobilising fall back centre at Stratford instead. Therefore, a project was launched to relocate the ICT infrastructure from TfL's facility at Woking to Stratford in August 2019, at a saving to the Brigade of some £237K.
11. Now that ICT systems reside in the Stratford site, the pressure to re-locate systems to the cloud has reduced significantly. In addition, and perhaps of more importance is that now we are residing in a Brigade owned premise, the business case for using DRaaS has been significantly diluted and as it stands does not look viable. However, ICT will continue to develop plans for the use of cloud-based services where appropriate but is unlikely to move forward with cloud-based disaster recovery in the short to medium term.

Technology support for staff with disabilities

12. Since the launch of the strategy, ICT have made significant progress with the use of the software to support staff with disabilities (and meet the Brigade's duties under the Disability Discrimination Act (DDA)). Our ambition is to ensure that specialist software is available to any staff member who wants to use it, without special hardware provision having to be made. Whilst there are some licensing implications to be considered at present, we feel that good progress is being made. Specifically: -
 - ✓ Read&Write Gold software is now available via the Citrix platform (i.e. thin client desktop), allowing users to access this software without having to have a dedicated laptop. The software will read documents and emails, and allow users to dictate text, without the need to use the keyboard. This is a very significant step forward as there has been a big demand for this.
 - ✓ Specialist software, to support DDA requirements, is now also available on new Windows 10 tablets and laptops.
 - ✓ Going forward, with the planned implementation of MS Office 365, we can plan to make Office 365 'speech to text' and 'text to speech' functionality will be available (subject to testing) to any staff who wishes to use it.

13. We now also have, for the first time, details of all users who require specialist support with details of their equipment. This will make it significantly easier for us to manage the technology provision and ensure users have the appropriate equipment and software.

Our top priorities – update on progress

14. The current digital strategy included, as appendix B, a list of the top priorities which would be completed (or started) during the life of the strategy¹. The tables in Annex A provide the board with an update on progress against these operational/frontline and back-office/support priorities; shaded items have been completed in the first year.

15. Also in Annex A, is a table listing other significant deliverables (in addition to those set out at para 14 above), that ICT with client departments, have delivered at Q3 2019/20 (end December 2019).

Changes to the strategy document

16. The aim of an annual roll forward of the strategy would be to make small adjustments to the text to reflect things that had been completed in the year, and to add new initiatives that might have come along during the year. It is not a substantial re-write or change of direction. Some minor changes have been made to the original document on this basis, with the key changes being:

- Reflection of the need for information and technology work to support the Brigade's developing transformation programme as set out in the agreed Delivery Plan (and including responses to the Grenfell Tower Inquiry phase 1 recommendations, and the action plan arising from the HMICFRS inspection of the Brigade in 2019).
- Implementation of 999 Eye in Control.
- Firmer commitments on a new Windows 10 style desktop incorporating Office 365/SharePoint Online for all staff (running under Citrix 'thin client' and on mobiles devices).

17. The revised strategy document is at Annex B to this report and is recommended for agreement (more significant changes from the original are marked in **yellow highlighter**).

The current work plan

18. Attached to this report as Annex C is the current three-year work plan. This shows projects completed since the current Strategy was agreed in late 2018, and new items added during the year.

19. This work plan contains specific deliverables (nearly 100) that we have set out to either start or complete during the life of the strategy. These deliverables focus on change initiatives, and do not include 'business as usual' activity undertaken within the ICT Department to maintain systems and infrastructure and deliver day-to-day ICT services.

20. The work plan is reviewed on a quarterly basis and initiatives will change. For example, as the Brigade's new Delivery Plan develops, and decisions are made on the Brigade's response to the Grenfell Tower Inquiry phase 1 recommendations, and the HMICFRS 2019 inspection report, initiatives and timelines in the ICT work plan will need to be revised.

Legal comments

21. Under section 9 of the Policing and Crime Act 2017, the London Fire Commissioner (the "Commissioner") is established as a corporation sole with the Mayor appointing the occupant of

¹ Replacement mobilising system is outside of this timeframe

that office. Under section 327D of the GLA Act 1999, as amended by the Policing and Crime Act 2017, the Mayor may issue to the Commissioner specific or general directions as to the manner in which the holder of that office is to exercise his or her functions.

22. By direction dated 1 April 2018, the Mayor set out those matters, for which the Commissioner would require the prior approval of either the Mayor or the Deputy Mayor for Fire and Resilience (the "Deputy Mayor"). Paragraph (b) of Part 2 of the said direction requires the Commissioner to seek the prior approval of the Deputy Mayor before "[a] commitment to expenditure (capital or revenue) of £150,000 or above as identified in accordance with normal accounting practices...".
23. The Deputy Mayor's approval will therefore be required for the Commissioner when it comes to any new procurement of £150,000 or above planned under the digital strategy.
24. Furthermore, any data which is subject to data protection legislation must be treated in accordance with that legislation, and any proposed procurement planned under the digital strategy must be in compliance with the Public Contracts Regulations 2015.
25. The strategy proposed is consistent with the Commissioner's power under section 5A of the Fire and Rescue Services Act 2004 may do anything they consider appropriate for purposes incidental to their functional purposes.

Finance comments

26. This report sets out an updated information and technology strategy covering 2020 – 2023. The report sets out a range of priorities over the life of the strategy. Where possible these priorities will be contained within existing resources. However, some will require additional funding that will be reported on as part of the budget process for future years, or in separate reports as appropriate.

Sustainable development implications

27. There are no specific sustainable development implications arising from this proposal.

Workforce comments

28. There are no plans for staff side consultation.

Equalities implications

29. The London Fire Commissioner and decision takers are required to have due regard to the Public Sector Equality Duty (s149 of the Equality Act 2010) when taking decisions. This in broad terms involves understanding the potential impact of policy and decisions on different people, taking this into account and then evidencing how decisions were reached.
30. It is important to note that consideration of the Public Sector Equality Duty is not a one-off task. The duty must be fulfilled before taking a decision, at the time of taking a decision, and after the decision has been taken.
31. The protected characteristics are: Age, Disability, Gender reassignment, Pregnancy and maternity, Marriage and civil partnership (but only in respect of the requirements to have due regard to the need to eliminate discrimination), Race (ethnic or national origins, colour or nationality), Religion or belief (including lack of belief), Sex, Sexual orientation.
32. The Public Sector Equality Duty requires us, in the exercise of all our functions (i.e. everything we do), to have due regard to the need to:
 - (a) Eliminate discrimination, harassment and victimisation and other prohibited conduct.

- (b) Advance equality of opportunity between people who share a relevant protected characteristic and persons who do not share it.
 - (c) Foster good relations between people who share a relevant protected characteristic and persons who do not share it.
33. Having due regard to the need to advance equality of opportunity between persons who share a relevant protected characteristic and persons who do not share it involves having due regard, in particular, to the need to:
remove or minimise disadvantages suffered by persons who share a relevant protected characteristic where those disadvantages are connected to that characteristic;
- (a) take steps to meet the needs of persons who share a relevant protected characteristic that are different from the needs of persons who do not share it (;
 - (b) encourage persons who share a relevant protected characteristic to participate in public life or in any other activity in which participation by such persons is disproportionately low.
34. The steps involved in meeting the needs of disabled persons that are different from the needs of persons who are not disabled include, in particular, steps to take account of disabled persons' disabilities.
35. Having due regard to the need to foster good relations between persons who share a relevant protected characteristic and persons who do not share it involves having due regard, in particular, to the need to—
- (a) tackle prejudice, and
 - (b) promote understanding.
36. An Equality Impact Assessment (EIA) was undertaken in January 2020. The impact assessment found that the progress so far in respect of the availability of assistive technology, both on Citrix and Windows 10 laptops, would have a broadly positive impact on staff with disabilities.

Our top priorities – update on progress

The current digital strategy included, as appendix B, a number of top priorities would be completed (or started) during the life of the strategy². The tables below provide the Board with an update on progress against these operational/frontline and back-office/support priorities; shaded items have been completed in the first year.

Operational / Frontline

Operational / Frontline	Position as at Q3 (end December) 2019
Complete work to allow transfer of mobilising data between blue-light partners (Multi Agency Incident Transfer - MAIT).	A Project is underway to develop a proof of concept for MAIT and ultimately a working system linked to other blue light agencies. The Vision mobilising system has been modified to be MAIT compliant and at present we are in the process of setting up a secure connection to a cloud-based message exchange hub, so that we can begin testing. The Brigade is working with Welsh FRS on the proof of concept and leading the project with a number of interested stakeholders including LAS, MPS, various FRS and the HM Coastguard.
Support the community use of our fire stations.	ICT are working with the Communications Department Digital Team to develop a web-based resource booking system for the public to see the availability of, and book LFB's community resources. This framework will also allow LFB staff to book station-based workstations where they are available. An enhanced Station Diary will allow stations to manage the availability of community resources.
Complete updates to the system that manages our Home Fire Safety Visits.	The data capture form used by stations following an HFSV has been redesigned by ICT and CFS. Delivery (into test) is scheduled for March 2020. A version of this form is likely to be made available on the appliance tablets at the same time. A new Person At Risk (PAR) form will be piloted early 2020 by CFS and some boroughs.
Complete the roll-out, for appliances, of new Mobile Data Terminals (MDT), with SatNavs and tablets.	Anticipate completion of all vehicles, including special appliances by June 2020.
Replace operational officer pagers with a pager 'app' for Android phones.	A project is underway to deploy a phone based 'app'. Implementation will be before November 2020 to allow a seamless transition of service from the existing pager provider.
Support the move for operational staff from 'Role to Rank' (R2R) by completing system changes and changes to policies.	COMPLETED successfully in October 2019.

² Replacement mobilising system is outside of this timeframe

Operational / Frontline	Position as at Q3 (end December) 2019
Support the implementation of FRS national operational guidance within the Brigade, including a new system to manage and access for operational (and other) policies.	The Brigade still awaits progress with the development of the Local Service Integration Tool software being developed by the NFCC Central Programme Office, which will help us deploy updated policies and procedures in line with NOG. This software had been expected for testing in Q3 2019/20, but has been delayed pending formal agreement between the LFB/NFCC on the provision of CPO services. It is hoped that progress will be made in early 2020.
Deliver new incident ground radios for our firefighters.	A project was established to deliver new fire ground radios. The project was paused to allow operational staff to consider the most appropriate technological solution. Due to various dependencies associated with BA equipment, this project has now been subsumed as a work stream of the RPE project being run by Assistant Director, Operational Policy.
Deliver (subject to national project) the Emergency Services Network (ESN) to replace Airwave radio.	Project is on-going. ICT continue to provide on-going support, working with other blue light agencies in London.
Replace our fire safety system with an overall premises risk management system, including our Operational Risk Database including the Premises Risk Assessment.	The Commissioner's Board (July 2019 – LFC-0212) agreed a proposal to create a One Risk (<i>1Risk</i>) solution to hold all the Brigade's building risk information. The new system would replace the Farynor fire safety system, the Operational Risk Database, Home Fire Safety Visit database, etc. A new project has been established that is now developing requirements for the new solution and which will progress development and implementation work, over the next few years.
Replace our 999-mobilising system (by 2026).	A project has been created to facilitate the replacement of the Brigade's current mobilising solution and this is currently awaiting funding approval. Current plans are to aim for deployment of a replacement solution in 2024.

Support / Back Office

Support / Back-Office	Position as at Q3 2019
Roll-out Android mobile phones to replace Windows phones.	COMPLETED. In addition, a new Mobile Device Management system (MDM) to control the phones has been installed as well.
Complete LFB website security assurance.	A security management plan is being written and plans being made to initiate a penetration test.
Implement a cyber defence system.	COMPLETED The Darktrace cyber-defence system was successfully deployed in August / September 2019.
Launch the LFB Data portal – a new data platform, as part of our Business Intelligence Solution (BIS).	COMPLETED The portal was successfully launched in October 2019. Work continues to make data reports/dashboards (Power BI) available via the new portal as the single point of access. A new data platform is being

Support / Back-Office	Position as at Q3 2019
	designed to sit behind the portal and reports, to be implemented over the next year.
Update the 'thin client' desktop to Windows 10 'look and feel'.	A Modern Workplace Programme has been established that will update the 'thin client' (Citrix) desktop to Windows 10 'look and feel' (alongside mobile devices like tablets and laptops which already have Windows 10). The programme includes the introduction of upgraded MS Office at all Brigade sites (with Office 365 online only at fire stations, but desktop/online for all other users). The Programme will also seek to encourage new ways of working by departments, exploiting the new tools and services available with Office 365. Anticipated completion for key elements of this project is toward end 2020 although SharePoint Online will take longer to roll-out.
Roll-out updated MS Office with Office 365 Online at fire stations (and including SharePoint Online, and mailboxes in the Cloud).	
Complete work to improve personal information retention to be more GDPR compliant.	The Brigade's arrangements for data protection/GDPR were subject to internal audit review during late 2019, and the outcome report/recommendations will be actioned during 2020.
Improve our management of images and video (including better GDPR compliance).	An Image Management Governance Board was established during 2019 to bring together different strands relating to Brigade images (still and moving). The Board's remit includes images taken/used for fire safety/investigation purposes, web publication, drone and body worn camera imagery, 999 Eye, etc.
Support the delivery of a new performance administration management (planning) system.	System has been procured by the Strategy and Risk Department (not an ICT lead).
Complete the GLA/LFB Information Sharing project to provide a better way to share data between partners in London.	During 2019, we jointly procured an Information Sharing gateway with the GLA and we are now working with the London Office and Technology and Innovation (LOTI) and LOTI signatory boroughs to better understand/work to standardise information sharing processes and protocols.
Complete the 'Cyber Essentials' security accreditation.	We plan to start the first stage of this (gap analysis) early in 2020.
Replace our finance/purchasing system(s) and human resources/payroll system(s).	A project has been established with the object of replacing these systems.

Other Work Plan deliverables

The table below lists other significant deliverables (in addition to those set out at para 14 above), that ICT with client departments, have delivered at Q3 2019/20 (end December 2019).

Deliverable	Completed Y / N	Comments
Meeting room booking system at Headquarters	Y	COMPLETED in December 2019.

Deliverable	Completed Y / N	Comments
Hosted Telephony (re-tender)	Y	Procurement is completed. Currently in the transition phase which is taking longer than anticipated.
Software support for DDA users (available on Citrix desktop)	Y	See comments in main report.
Remove Enterprise Vault (mail archiving)	N	On-hold (Grenfell related)
Relocate LFB secondary data centre from TfL Woking site to Stratford	Y	COMPLETED in September 2019 (as outlined in the main report).
Implement 999 Eye	Y	This is implemented from a technical perspective. Waiting to deploy it to a Control work station. Control management to determine go-live.
Farynor mobile working	Y	Water office
Apps for appliance tablets	N	Some apps installed, others to follow

Foreword

This strategy sets out our vision for information and technology (I&T) services over the next three years. It makes an honest appraisal of how far we have come, what we do well and what we need to do to provide our staff with the right digital environment to enhance the safety of all Londoners.

We face a series of challenges across our work with data, information and technology and we know we need to be brave enough to face them and make changes to the way we work.

In May 2017 we asked our staff what they thought of I&T services in the Brigade. We discovered that, on the whole, they thought we did a good job but that we were not innovative, nor did we embrace new technologies. We recognise this and provide some commentary in response.

As we developed this narrative about our vision for I&T services, we kept coming back to the reality that we provide services to staff working in diverse environments.

Our staff work:

- at the fire station
- on the incident ground
- in the community
- in the office
- in the control room.

In fact, our work on this strategy revealed the massive potential, particularly in our fire stations, for digital transformation to relieve some of the burden of our paper heavy, analogue approach. We explore some of that potential in the imagined future states – our personas – set out in Appendix A.

And this is what makes our approach to I&T special. Being able to provide I&T services across these very different environments, we need to be alive to the potential that constant changes in technology represent.

There are three distinct threads running through this strategy:

- Emphasis on a resilient and secure infrastructure.
- A focus on Cloud technology.
- A belief that data is intrinsic to our digital transformation.

We will continue to talk to our staff, work with our partners in London, other emergency services and the wider fire and rescue service to learn and deliver the best service we can. As part of that commitment, we have signed up to the Local Digital Declaration, which sets out a common aspiration for the future of local public services.

I encourage you to read this document and share your thoughts with us.

Julian Martin
Chief Information Officer
London Fire Brigade

Introduction

London Fire Brigade is here to help make London the safest global city. Our vision is to be a world class fire and rescue service for London, Londoners and visitors. In our four-year London Safety Plan 2017 – 2021, we set out how the Brigade will manage risks to communities in London along with making a contribution to national, cross-border and multi-agency incidents.

Like the best public services and companies, the Brigade needs to be lean, agile and data-driven. Multi-agency working will be common practice as part of the emergency services collaboration and it requires an evolution in how we use our I&T services to support its development. As a result, our truly mobile workforce will be able to work in a variety of places.

Not only does the Brigade need to manage risks to communities, it also needs to manage risks in the way it manages its I&T. As we seek to deliver the Brigade's vision, we find that three themes run throughout our strategy. One of the themes is about striking the right balance between the need for security and resilience with the desire to innovate and introduce new ways of working. Security and resilience should not necessarily be viewed as opposing forces but more as components of a well-designed solution.

Our other two themes are a concerted move to a Cloud based approach to our I&T provision and a firm commitment to using our data in an open and transparent way to improve our services.

With our commitment to the Local Digital Declaration in 2019, we see a growing commitment throughout the public sector for transforming services using digital tools and technology. We share the ambitions of the Declaration, particularly as we continue to collaborate with many partners across London and beyond.

All of this provides a starting point for our strategy. Here we set our plans to enhance and improve what we do, acknowledging the challenges we face along the way.

THE POWER OF DATA AND INFORMATION)

Data and information are the lifeblood of our organisation; they are both vital to improving fire response, prevention and protection services to all Londoners. Everything the Brigade does depends on the effective use of data and information; either at the point of service delivery, or to check and monitor how well we are delivering our services.

The Brigade's need and uses for data and information drives the technology choices and direction of travel for I&T services. This includes:

- The systems and tools we use to create, collect or process information and data.
- The infrastructure that supports those systems.
- The devices that our staff use to access or input data and information.

WHERE ARE WE NOW

We are really good at providing a robust, reliable I&T service and using the data and information we hold to support London Fire Brigade in its work.

We need to build on our solid technology foundations. We deployed mobile data terminals on fire engines in 2009, initiated mobile working projects in 2011 and 2016 for our fire safety staff and have a very good system for staff to access our I&T when away from the office. We want to enhance these areas even more.

What we don't do so well is to develop the elements of I&T around the edges. By this we mean the technology services that make a difference to the staff such as the social applications, enhanced Wi-Fi beyond our core service, and deployment of apps that bring I&T at work in line with what our staff experience using personal I&T and phones. These have traditionally taken a back-seat to the delivery of technology and systems for mobilising and core business services.

One way in which we have improved how we work is in delivering our Business Intelligence Solution project. The project is making a step change improvement in how we present data.

We have lots of data, it is good quality and reliable. We recognised a long time ago that as the quantity of data and information increases, we would need more sophisticated ways of making data useable and accessible.

One way we have improved how we work is in delivering our Business Intelligence Solution project. The project is [REDACTED]. Using tools like the Azure Data Factory and Microsoft Power BI, data will be more easily accessible and useable than ever before.

The Data Protection Act 2018 and the General Data Protection Regulation area driving different ways of managing and sharing personal data, and we must deliver the core concept of 'privacy by design' in how we collect and use personal data. [REDACTED]

[REDACTED], which will have wide-ranging benefits for the way data is used to help make London a safer city.

And, with the GLA and group bodies, we have signed up to voluntarily comply with the UK Statistics Authority code of practice for statistics, which will introduce new standards for the way we publish some of our data. The establishment of the London Fire Commissioner as the fire and rescue authority for London (London Fire Brigade) in April 2018 presents new opportunities to be an open and transparent organisation in terms of the data and information we make available to our stakeholders and Londoners.

We are keen to participate in data projects with others, and are involved with the London City Data Analytics programme, which is being supported by the Mayor's Chief Digital Officer as a programme of the London Office of Technology and Innovation (LOTI). The programme is about looking at new and creative ways to use data across different organisations to provide new insights and understandings, and drive improvement in service and outcomes for citizens.

We are now at a tipping point. In general, our technology infrastructure is solid. It is time to make everything mobile so that staff can work wherever they want or need to be.

Where the nature of the role permits it, we want our staff to be truly agile in their approach to work. We need the right attitude in our approach to developing our I&T to help make this happen.

Realising our ambition rests on our appetite for risk and, of course, sufficient resources to realise change. We need to weigh up our need for resilience and security with the desire to support staff to work flexibly. Agility, resilience and security should not always be viewed as mutually exclusive, and this is important when determining the appropriate tools that staff will need to support flexible working and to ensure that the Brigade remains protected against cyber-attacks, data loss, etc. In addition, we cannot of course, forget the various legal data protection and regulatory requirements.

Our challenge is how to strike the right balance within our existing technology arrangements. We plan to stay a Microsoft organisation (because of our existing investment) so we need to think how we can work within this environment.

TRANSFORMING THE BRIGADE

[Redacted content]

“ The introduction of our Android mobile phone working environment provides the opportunity to improve our messaging service and to the removal of pagers that are still being used by operational staff.

WAYS OF WORKING

We need to look at how our office-based staff work. We have staff who use a mix of desk-based terminals and mobile tablets to do their work. We invested heavily in a zero (thin) client environment using a product called Citrix and this has significantly reduced the cost of ownership, increased security and simplified our management of the information technology infrastructure.

We discovered that along with the many advantages of having a zero-client environment, there are issues that arise from adding new technology, such as Microsoft Office 365. We have resolved these for now, so we're going to continue with the zero-client approach. We will keep an eye on industry developments and, in particular, whether the Cloud offers any increased benefits to us for our zero-client approach as we move more services in that direction.

While we retain our current approach to desktop computing for our staff, we also need to support mobile working and the increasing use of tablet devices by our staff. We are unsure what the actual split of staff preference between desktop and tablet might be in the long term. We will need to look at this in more detail to make informed predictions to balance our investments both in technology but also in training for staff.

[REDACTED]

We also think there may be potential to enhance mobile capability on the fireground, possibly leveraging capability delivered as part of the Emergency Services Mobile Communications Programme ESMCP, which includes

“ Getting security right is critical to the successful move to mobile ways of working.

delivery of the Emergency Services Network (in time) and would be looking to explore the practicalities of this approach.

Getting security right is critical to the successful move to mobile ways of working. We have adopted a strong multi-layered authentication for our tablets and laptops that requires not only an ID and password, but an extra code delivered via a mobile phone. Once our staff become familiar with this new login procedure, we believe they will quickly adapt and it will become second nature to them.

Although we have been able to reduce the volume of paper and printing significantly over the last 10 years through new ways of working, there is clearly more we can do about this.

During the life of this strategy we intend to deliver further reductions in our use of paper and printing, by enabling paperless meetings, the better sharing of information electronically, and reducing paper form-filling.

To make a success of new ways of working, we need to make sure our I&T is an enabler to assist in the changes we want to make and to allow our staff to guide us along the way. To help facilitate this, we will be seeking to establish a user group to ensure feedback from staff is considered by the appropriate people in the ICT department.

COLLABORATIVE WORKING

We know that our staff like to collaborate when they work. They collaborate with teams in their own departments, across departments and with other organisations. We need to provide the right I&T environment to support their work in a safe and secure way.

The introduction of Microsoft Office 365 will provide staff with the technology and systems they need to collaborate safely and securely. One of the tools offered as part of Office 365 is called Teams. We have heard some very positive feedback from other organisations that are using Teams and we are keen to understand what works well and how it has transformed ways of working elsewhere.

One aspect of Teams is the shift away from individual email usage to a messaging environment where conversation coalesces around a particular team or project. This has the potential to provide a rich working environment to enhance collaboration outside of traditional physical team boundaries and to create a history of work that would previously have been buried in individual email accounts.

We are excited about the potential of Teams for the Brigade and will be investing considerable effort to make use of it to improve ways of working.

COLLABORATING WITH OUR PARTNERS

We will also look to the other members of the Greater London Authority (GLA) group to see what they are doing to support collaborative working.

We already meet regularly with the GLA group bodies to discuss technology matters of common interest, and we are also participating in the wider discussion forums like the London Peer Group which brings together local authority staff in London interested or involved in creating and delivering digital services. This initiative is being supported by the Mayor's Chief Digital Officer for London, and the London Office for Technology and Innovation (LOTI).

We have a good working relationship with the Metropolitan Police Service and the London Ambulance Service. Senior staff from our respective I&T departments meet regularly to discuss strategy and ongoing work, looking for opportunities to learn and join up where it provides real benefits. This relationship is particularly helpful when it comes to national I&T initiatives that affect us all, such as the replacement of the Airwave communications system with the Emergency Services Network. We continue to follow the ESN roll-out programme with great interest.

One example of how a joined-up approach can benefit us is in data analysis. We have a team of data analysts in

the Brigade who already benefit from working collaboratively with other data analysts drawn from the GLA family and beyond. By working in this way, we can be sure to make the most of the huge amounts of Brigade data that we hold. Given the duty to collaborate that came into force last year, we are keen to see collaboration take place in the I&T arena as well as the front-line of service delivery.

The Local Digital Declaration can be particularly helpful to us in this area of our work. In it, there are sound principles of sharing plans and experience as well as a commitment to "working collaboratively with other organisations and reusing good practice". We support this approach wholeheartedly.

We are seeing other fire and rescue services and the NFCC use Workplace by Facebook to enhance cross organisation collaboration. The well-known Facebook interface allows work-based communities of interest to communicate and this is attractive, but we must consider the security and resilience considerations to operate in this type of environment. Nevertheless, if Workplace (or similar tools) offers the opportunity for staff to collaborate in specialist national forums as they have done using the existing NFCC Communities facility, then Workplace may be a useful addition to our technology collaboration offer.

We don't want to overwhelm our staff with too much choice or too many places to have to manage to do their jobs. Collaboration tools should be simple and easy; if they are not intuitive and become a burden, then we should rethink the way we work. It is important that staff know how to use the different communication channels we provide for them.

INVESTING IN OUR STAFF

We should embrace staff who are natural early adopters to test technologies with us and encourage staff to learn from others by building networks of people with shared interests.

Similarly, we should identify and support staff who wish to use existing technology and systems in new ways. For example, our Business Intelligence team uses Microsoft Power BI to develop dynamic reports and dashboards to provide instant access to performance data. We want our staff to be 'data literate' and training non-specialists to use information tools like Power BI is one way to achieve this.

We also want all our staff to enjoy the benefits that new technologies can bring. Updating the software on desktop terminals will help us with accessibility features to meet the needs of users, including those with disabilities. We already deploy text to speech, speech to text and visual learning software and work is well advanced on making these tools available as part of the upgraded Citrix desktop.

All of these examples help our staff do their jobs better and help the Brigade to be innovative and creative as we move from our I&T being reactive to a place where it is predicting what our staff might need in the future.

A lot of I&T staff time is spent doing work that no one sees but everyone would notice if it wasn't done. For example, activities like applying anti-virus updates and patches or upgrades to software. This is extremely important work but not necessarily fulfilling.

We want to find a different way to get these important tasks done and free up our staff to do more interesting work.

Our goal is to develop our staff to work on the projects that deliver on the ambitions set out here. Projects will move along quicker if the experts are available to assist. This has the advantage of boosting our own staff,

improving retention and recruitment along the way. It's a win-win situation.

Another area for improvement is in how we identify new information and technology trends that enhance the working environment for our staff. Horizon scanning should be built into what we do in our everyday work.

USING CLOUD BASED SERVICES

Currently we manage a hybrid environment where some of our technology and infrastructure are on-site (using Brigade buildings) and some are hosted in the Cloud.

We need to get the balance right between what we do in the Cloud (in terms of storing and processing data) and what we do on-site, to maintain security and resilience.

[REDACTED]

One challenge is to work out the optimum level of network links between physical sites to the Cloud, with guaranteed and dedicated access. Once again, the consideration centres on our attitude and appetite for risk and how far we want to go with changing the way we work to ensure we deliver our service but retain security and resilience.

Another part of our thinking about the greater use of the Cloud is how the technology infrastructure is managed. Infrastructure as a Service (IaaS) is a well-known concept in the technology industry. Our aim for IaaS is to have our own space in the Cloud hosting our infrastructure with the day-to-day repetitive tasks such as software patching and anti-virus updates carried out by our managed service provider instead of our own staff (released to do more interesting work as described above). There is a cost to this, but we will have a reduction in capital spending because we would not be buying new computers and servers.

We also need to be sure our back-up strategy and our testing services would work well in a Cloud environment. All of our testing work could be moved to the Cloud. Currently the testing facilities are idle much of the time and a wasteful of resources.

We want to understand the full potential of the Cloud to help us deliver our I&T services better. We have employed a specialist consultancy to do this. It's complex and time-consuming but important work.

FINANCIAL CHALLENGES

Budget is of course critical for delivering our I&T ambitions and this is a perennial challenge for any organisation.

Our budget for technology is split into capital (to buy things) and revenue (to do things with). Adopting IaaS would have an impact on our budget, which is heavily weighted to capital and requires a shift to a revenue-dominated budget.

Given that this revenue budget would be buying critical services, it would have to be ring-fenced. The organisation is significantly dependent on technology to deliver almost every aspect of its services to London. We have been fortunate that we have had continued investment, not only to maintain our current infrastructure, but to grow and change our offerings to reflect the business needs and drivers of the organisation.

I&T has a cost regardless of how it is delivered and its critical infrastructure without which the Brigade could not function. The challenge is to be able to make the move away from capital to revenue, while the Brigade overall faces continuing pressures in its revenue budget and the need to find savings in future years.

DIGITAL FOR OUR SERVICE USERS

Many of the services we deliver to Londoners are different to those of a typical local council. While we deliver our services to people at home, at work and elsewhere, many of these services, by their nature, have to be delivered face-to-face and onsite.

But we are committed to delivering as many of our services digitally by equipping our staff with the digital tools they need to support their face-to-face interactions. We recognise the importance of considering how different groups will access our services, including our own staff, and will take into account the differing needs of users who are potentially likely to be impacted when we implement I&T solutions.

We launched our current website in April 2018 – which meets current accessibility standards – and this provides a good platform to develop digital services where they are appropriate for what we do. During the life of the strategy, and beyond, we will look at new ways to deliver services in a digitally enabled way, whilst always considering the special needs of different users, like older people and those with disabilities. We are also maximising the opportunities available to us to deliver a wide range of information about the Brigade in an accessible way, and to develop this to provide better insights for the public about what the Brigade does using new data presentation tools.

We will be brave and shake up the way we've always worked, be a bit disruptive and make the Brigade better for it.

MOVING FORWARD

Given all that we set out here, it is clear that we have to think differently when it comes to delivering I&T to support the vision of the Brigade.

We want to support new ways of working that are centred around making best use of Cloud and put data at the heart of what we do, without compromising security and resilience. We can balance the risk to deliver on our strategy.

We will be brave and shake up the way we've always worked, be a bit disruptive and make the Brigade better for it. We've got some help from external I&T consultants, they have done a health check on us and we're looking good but we need to address some issues before we can move ahead on all fronts.

We have an I&T work plan containing nearly one hundred discrete pieces of work or projects that will enable us to deliver the ambition set out in this strategy. Appendix B gives a flavour of all the change initiatives we need to deliver to keep our I&T infrastructure and services modern and up-to-date, supporting business changes across the organisation. This doesn't include the huge amount of vitally important 'business as usual' activity that goes on to support the infrastructure and systems, as well as dealing with user issues and queries.

Through the activity in our I&T work plan we will be able to enhance and develop our I&T to support Brigade staff.

Regardless of whether someone is at the fire station, on the incident ground, in the community, in the office or in the control room, they should have the very best I&T we can offer, keeping Londoners safe along the way.

Appendix A: How will our staff benefit?

In this section, we outline the way in which the lives of our staff will be affected, for the better, with the introduction of the technologies and use of data outlined in the strategy. 'Personas' have been created to illustrate the impact of I&T being delivered by the Brigade.

These 'personas' are simply to illustrate how the different jobs people do could be changed by the better use of technology and use of information. Some of the ideas are 'off the wall' at this stage, and these examples provided do not always represent a confirmed plan.

Two symbols are used in this appendix to show:

- ◆ things planned and will be delivered during the life of the strategy.
- ◇ things which, at this stage, are more 'imaginative' and may take longer to deliver, or might eventually be in a different form.

The station Watch Manager

Asif is a well-established Watch Manager at a two-pump fire station. The members of his watch vary hugely in how much interest they have in I&T and often the tasks that require the use of the computers on the fire station fall to the Crew Manager as she is the most confident at using it.

AT THE FIRE STATION

- The **4G enabled tablet** will host **3D images of buildings** on the station ground. Preparing for operational risk visits will be much easier and recording the data – including the premises risk assessment – directly onto the tablet means that the Operational Risk Database is dynamically updated and available for all to see.
- Firefighters now login to the uniform supplier website to see a dynamic **3D model of their fire kit allowance**. It tells them when it was bought, when it was cleaned and its lifespan for replacement. They can click on the image of what they want to clean or re-order and it instantly creates an order.
- Online training will be easier to find using the **new training portal**, and it will be linked to new updated operational guidance/policies so that you get a complete view of everything you need to know about dealing with a particular incident type or piece of equipment.
- All members of the watch will be able to look at the **LFB Data portal** to access the management and performance data they need to help them do their jobs. Being able to access data when needed will support a new approach to performance management.
- There is **no more paper on the fire station**. All the folders of signed forms have gone. Everything is now digitised and accessible via apps on the desktop or tablet devices via the Cloud. The audit trail of routines on the station is all digital and all the checks and balances are in place to know when actions need to be taken for all routines.

IN THE COMMUNITY

- All firefighters will be able to use the **4G enabled tablet** that is stored on the appliance to complete the indemnity form and to record the outcomes of Home Fire Safety Visits. This means that the data is sent immediately to the central database and firefighters will no longer have to sit down at a computer in the station office to record the visit based on paper notes.

ON THE INCIDENT GROUND

- **4G enabled tablet** is now a critical part of the appliance. It is used to update the **mobile rolcall board**, **order Breathing Apparatus cylinders** to replace those used during an incident.
- The **MDT** that sits on the fire appliance will continue to provide access to important data like Chemdata, car manufacturing specifications and ePiPs – to get an instant visual on the buildings in the area of the incident. The **tablet**, which also accesses the same datasets as the MDT, is used by firefighters in the rear of the appliance and can be consulted on the incident ground as well.
- The driver of the appliance will use a specially configured **TomTom satnav** for all navigation, it will automatically get the location of the incident sent from the mobilising system.
- When crews return to the fire station, **the appliance is scanned on entry** and all the equipment logged. Anything missing will immediately be notified to the watch manager who will then agree for items to be replaced using the Brigade's procurement system. No re-keying of data as all the systems talk to one another.

The Station Manager

Emma is a Station Manager. She is newly promoted and keen to make her mark. She is a big fan of technology but finds the Brigade's systems slow and uninspiring. She wants to get real-time access to data about how her station is doing in all areas of its work so that she can respond quickly to change and improve performance. She wants to bring her staff with her and get all the watches up to speed on data analysis so that they too can understand the power of data to improve what they do. She also wants to streamline the way admin work is done, to relieve the bureaucratic burden on her watch staff.

AT THE FIRE STATION

- Emma will get easy access to performance data through the **LFB Data portal** ♦ and some user-friendly dashboards and reports based on her specification created by the Brigade's expert users of **MS Power BI** ♦.
- Using **MS Teams** ♦ (which comes with **Office 365** ♦ which is available at stations) with her watches, Emma can blend the need to share information on a formal level with some fun, team building along the way. Emma can set up Teams to suit her, and that includes adding in different media, like GIFs, may seem like a distraction but have the benefit of adding humour while people work.
- **Using Brigade apps** ◇ on her desktop computer (via Citrix) or via her phone (Android apps), Emma will be able to do many of the regular tasks more easily and simply.

IN THE COMMUNITY

- With her **Brigade issued Android phone** ♦, Emma will gain access to Brigade systems wherever she is. She will be able to work safely and securely using the new functions on her phone and use the device for her own personal use too. The **phone will act as a pager** ♦; no need to carry three devices around.
- **Workplace by Facebook** ◇ is a great way for Emma to build community outside of her station. She is ambitious, so she wants to know what's happening in the wider world of the Brigade and the fire and rescue service nationally. By joining groups on Workplace and accessing them on her Android phone, Emma can keep up-to-date on topics that interest her and contribute to debate while doing her day job.

ON THE INCIDENT GROUND

- Emma's **Android mobile phone** ♦ will give her access to all the information she needs about incidents via the **BOSS Mobile app** ♦. She will be able to update her status easily using the app on her phone via **BOSS mobile** ♦, so no need to keep phoning Control.
- Emma's car will have a **SatNav** ◇ just like the appliance which will automatically route her to incidents she has been mobilised to. This will save time and allow Control to effectively gauge her ETA to incidents.
- Emma will be able to call on the Brigade's **drones** ♦ to be mobilised to incidents to provide a birds-eye view of the incident ground. It is a powerful tool for her decision-making toolkit. These images will be available across the devices at the scene, from MDTs, tablets and phones, as well as being available to Control and remote monitoring senior officers and the press office via **Office 365** ◇.

The Borough Commander

Kemi is a Borough Commander (GM) with five years' experience at this level. She is a reluctant user of I&T and feels that the systems are not reliable enough, often falling to manual workarounds where she can. She is willing to learn and try out new solutions if they mean more mundane tasks are automated and free up her and her staff's time for other things.

AT THE FIRE STATION

- Kemi will benefit from the same tools available to Emma, and will be able to set up **MS Teams** to collaborate more effectively with her partners from organisations across her borough, including the local council, the other emergency services and the charities she works with on a day-to-day basis.

IN THE COMMUNITY

- Kemi's **4G enabled tablet** allows her to work more flexibly and will have a range of **Brigade apps** that will help her do her work more efficiently. The tablet will allow her to hold meeting papers electronically, and to mark them up with notes in advance of the meeting or whilst at the meeting. The tablet will allow her to access the Brigade's **LFB Data portal** which provides access to a wide range of performance information dashboards and reports, including those created using **Power BI**, that will help her work and engage with partners in the local council.

ON THE INCIDENT GROUND

- During an incident, the **body worn camera** worn by firefighters is recording the activity and the video is dynamically available to Kemi and Brigade Control so that they can see the incident simultaneously, this will make remote monitoring incidents far more effective.
- A **streaming video app** on a mobile phone will allow Kemi to stream images of an incident in progress to help Control understand the incident better, and those in command of an incident, to make more informed decisions. Brigade officers will have this as standard on their phone, but members of the public will be able to access
- A transcript of the audio from the incident that was recorded on the body worn camera is scanned by the Brigade's **artificial intelligence system** to work out the decision making at that incident based on previous incidents. It is recorded and reviewed by officers for training purposes.

The Control Room Watch

Martin is quite a new Operations Manager in London Fire Brigade, having worked previously in another control room and joined the Brigade on promotion last year. He is responsible for one of the six watches that manage the control room. He loves technology – the control room is a heavy user of I&T in the Brigade, so it's the perfect place for him. He is always looking for ways to improve the way that the control room can make best use of the innovations going on in this area of I&T.

IN THE CONTROL ROOM

- The feed from the Brigade's **drone** ◆ is now an established way of viewing incidents. The dynamic feed appears on the screen as soon as it is available and provides extra information about the incident.
- Emergency calls for assistance from other blue light services as well as other fire control rooms now **appear automatically on the screen** ◆ for Martin and his team to access and respond. They no longer need to wait or share information over the phone and re-key data. It's all done instantly.
- The public doesn't just call in with information about incidents now, but actually provide **video footage directly from their smart phone** ◆ at the scene. Martin and his staff can see live video footage of the incident before the crews arrive providing valuable situational awareness.
- In a separate stream, the control room staff are monitoring live feed from the firefighters' **body worn cameras** ◇. Again, it provides situational awareness on the ground, but later in the incident it shows the BA crews' position as they move through a property towards a caller who is trapped in a bedroom. The body worn cameras feed this information to the control operator who is on the phone to the caller trapped in the bedroom, enabling them to provide the caller with advice to help keep them safe.
- Where needed, the control room staff can also tap into the **live feed from the appliances** ◇ at the scene. The appliances are fixed, so it gives another view on the incident.
- With access to **TfL CCTV cameras** ◆ nearby, the control room is the place where the Brigade has a fantastic 360° real time view of an incident and can helpfully field queries from Brigade officers, the Press Office and others.
- Callers now use alternative, app-based ways of describing (e.g. what3words) where they are and the control room can **translate any app into geospatial data** ◆ to supplement the GPS data from the 999 caller's mobile phone signal.
- Social media is so ingrained that information about incidents sometimes appears online before a 999 call is made to control. Knowing this, the Brigade is now using **predictive analytics** ◇. It worked with leading artificial intelligence agencies to develop machine learning that has been trained to look for fire-related incident chatter on social media channels. Martin's staff now monitor this in a pop-up screen on their monitors, reviewing alerts as a business as usual activity.

The Fire Safety Inspecting Officer

Greg has been a Senior Fire Inspecting Officer for 10 years. He has a great knowledge of fire safety laws and has audited/inspected hundreds of buildings over the years. He is responsible for a team of inspectors and while he needs to spend a lot of time at his computer, he also wants to be out with his teams and on site so that he remains close to the front-line of this important area of the Brigade's work. He already makes good use of his dedicated fire safety tablet with its mobile working app.

AT THE FIRE STATION

- **MS Teams**◆ will be the mainstay of Greg's work. His distributed team will use it as the primary means by which they communicate with him and each other. His team **no longer use email internally** and Greg will see the benefit of being able to look back on conversation threads across all sorts of topics with different members of the team.
- Greg and his team **rely entirely on their tablets**◆ and have **stopped using a desktop computer** altogether. Even when they are in the office, Greg and his team simply plug in the Ethernet cable available from any desk and connect to Brigade systems or use the **super reliable wi-fi** instead◇.

IN THE COMMUNITY

- This team is the most agile of all the Brigade's teams and because they work in such a flexible way, the Brigade has reduced the number of desks that it needs to dedicate to inspection teams in Union Street.
- Inspecting Officers have had **4G connected tablets**◆ for some time allowing them to record the outcomes of inspections dynamically while on site. The next generation software solution will also integrate smoothly with other Brigade **premises-based risk systems**◆ and the new **██████████**◆, particularly those used by operational colleagues for recording risks and creating tactical plans for use at future incidents. Insights on the types of challenges that crews will face will also be used by Brigade training management to steer the training plans of local crews to prepare them for the types of situations that they will come up against.
- A **streaming video app**◇, which any 'responsible person' in charge of a building can download from the Brigade's website, will allow Greg to undertake a virtual re-inspection of premises from his tablet, to check that things he has asked to be addressed, have been done. The responsible person will be guided by Greg to show him things in the premises using the mobile phone. Greg can save a copy of the re-inspection video as part of the premises file on the fire safety system so he has a record of the inspection and an audit trail.

The Community Safety Officer

Marcus works in community safety. He is fairly new to the Brigade and is used to a great I&T set up from his previous job. He is really comfortable with I&T and keen to use Brigade and other data to provide the evidence base to develop community safety work.

IN THE OFFICE

- Marcus will get access to training on how to use **Power BI reports**◆ to help the team develop their policy interventions. He can find tutorials on Hotwire or spend some time with the Business Intelligence team, or other 'super' users in the Brigade, to get an insight into its potential. He won't create the reports, but he will become an intelligent consumer of them.
- Spending time with colleagues who aren't based in Union Street is really important for Marcus to get to know the Brigade. He will be able to seamlessly **transfer his working from his desk**◇ in Union Street to his tablet device, working on the way, at home and in other locations.
- It's clear that Marcus is a real fan of I&T and his manager has already put Marcus forward to join the new **'early adopters' I&T group**◇ that will help the Brigade continue to innovate its I&T offering in the years to come.

IN THE COMMUNITY

- Sometimes a tablet is too bulky and on his new **Android phone**◆, he can access his emails and files in **SharePoint**◆ wherever he is working. **Cloud storage**◆ means he doesn't have to use the thin client (Citrix).
- Using both **MS Teams**◆ and **Workplace by Facebook**◇, Marcus can develop online communities to help him understand what others are doing, share information and learn what works elsewhere.
- There is so much interest in new technology because of the Brigade's innovations, that the ICT department host **monthly 'unconferences'**◇ where staff generate an agenda of things they want to talk about, whether that's innovations from other sectors, personal experience or some ideas about how to make I&T better. There's a real buzz about digital in the Brigade now.

The People Services Manager

Erika has worked for the Brigade for over twenty years. She has seen the trends in human resources management come and go over that time. She's used to getting to grips with new I&T systems to manage the complexities of the Brigade's People Services function but as she nears retirement, she's optimistic about the improvements technology can bring to make employees' work lives even better.

IN THE OFFICE

- The paper trail is all gone. It's completely digital now. The **digital employee file** ♦ contains everything about each employee and is accessible, depending on access privileges, to anyone in the Brigade.
- The digital employee file is built using an **open data standard** ◇ allowing it to access the myriad legacy and proprietary I&T systems used by the Brigade over many years. The investment by the ICT department in this open data standard approach has had a huge impact on access to employee data and is completely aligned to data protection requirements.
- For Brigade employees, they now see a **personal dashboard** ♦ when they login in the morning. They no longer need to consult many different I&T systems, as it's all going on in the background, so when a new employee starts they don't have to learn how to use lots of different systems.
- For Brigade managers, their **team dashboard** ♦ delivered using **Power BI** ♦ and the new **LFB Data portal** ♦ gives an at-a-glance view on the team, drawing data from many Brigade I&T systems. The dashboard allows Erika to drill down into the detail and access the underlying systems. Having this overarching view on attendance, performance, leave allowances, training and so on, is a real step forward.
- One new feature that Erika really likes is the **talent management system** ◇. Using some open source software developed by the new '**sprint development**' unit ◇ in the ICT department, all of the free text used in staff performance reports is now **analysed using machine learning** ◇. Having developed the training sets for the machine learning, it can now identify staff with the characteristics that fit the profile of managers of the future.

IN THE COMMUNITY

- Working intelligently with **social media algorithms** ◇ Erika's People Services recruitment team has massively refined its advertising so that it targets potential recruits from under-represented areas of the community.
- Having analysed all the previous applications over the last decade, the recruitment system is able to determine, based on some **predictive analytics** ◇, the chances of an application being successful at each stage of the process. Using a machine learning approach gives Erika's People Services recruitment managers insight into applications and allows them to refine the recruitment process over time.

Appendix B: Our top priorities now

A separate detailed three-year I&T work plan supports this strategy and comprises the actions, tasks and projects that will make this strategy become a reality; this plan is updated quarterly. The work plan will be a living document, reflecting the changing demands placed on the Brigade's I&T services over time, as projects and tasks are completed and new ones are introduced.

In this appendix we highlight some of the top priorities for the next three years, as we see them now, and showing things we completed (shaded) and new initiatives added during the first year of the strategy. This is necessarily just the highlights of what we need to do, and the detailed three-year plan is the place to look to find more detail.

OPERATIONAL/FRONTLINE

- Complete work to allow transfer of mobilising data between blue-light partners (MAIT).
- Support the community use of our fire stations.
- Complete updates to the system that manages our Home Fire Safety Visits.
- Complete the roll-out, for appliances, of new Mobile Data Terminals (MDT), with SatNavs and tablets.
- Replace operational officer pagers with a pager 'app' for Android phones.
- Support the move for operational staff from 'Role to Rank' (R2R) by changes to systems / policies. [COMPLETED – November 2019]
- Support the implementation of FRS national operational guidance within the Brigade, including a new system to manage and access for operational (and other) policies.
- Deliver new incident ground radios for our firefighters.
- Deliver (subject to national project) the Emergency Services Network (ESN) to replace Airwave radio.
- Replace our fire safety system with an overall premises risk management system (*1Risk Solution*), including our Operational Risk Database including the Premises Risk Assessment.
- [REDACTED]
- [REDACTED]
- Replace our 999 mobilising system (by 2026).
- Introduce 999 Eye in the Control Room.
- [REDACTED]
- [REDACTED]

SUPPORT/BACK-OFFICE

- Roll-out Android mobile phones to replace Windows phones. [COMPLETED July 2019]
- Complete LFB website security assurance.
